

Monitoring

Overview

Sonar records and controls all employee computer activity, increasing staff productivity, decreasing exposure to litigation and meeting compliance requirements related to privacy laws and regulations. Unique in the industry, Sonar does not require you to purchase any hardware.

Employee Monitoring software application monitoring and blocking suite allows schedules to be set that control which software applications can be used and when. Time wasters such as Windows Media Player or iTunes can be blocked during work hours and allowed during off hours as desired. Dangerous applications, including FTP uploading or peer-to-peer programs like BitTorrent, can be permanently blocked. And of course, all activity is recorded and available to you in your online account.

Recognizing that a lot of work now gets done on mobile devices, now offers MobileMonitor so you can monitor Smartphone emails and text messages from the same client interface you are using to monitor desktops.
