

# Web Filtering

## Overview

Blocking inappropriate web surfing is critical not only to ensuring the security of your organization, but also to ensuring that your employees are productive, but web surfing is only a part of how employees spend their time Webfiltering is designed to extend your visibility beyond a simple list of URLs and give you a true understanding of whether or not your employees are acting in a safe and productive manner.

While other webfiltering applications are simply designed to enforce acceptable use policies, Webfiltering helps define the policies that it enforces by giving you total transparency into how your employees spend their time. You'll see everything from everywhere. No exceptions.

## See Everything

COMPETITON	What We Do	
<b>List of URLs</b>	<b>List of URLs</b>	<b>Screenshots &amp; Reporting</b>
aim.com amazon.com careerbuilder.com ebay.com etrade.com gambling.com google.com hotjobs.com espn.com facebook.com etc....	aim.com amazon.com careerbuilder.com ebay.com etrade.com gambling.com google.com hotjobs.com espn.com facebook.com etc....  <b>List of searches</b> Best ways to sue your employer How to find a better job Discount alcohol How to beat a lie detector Best excuses for a sick day	

### Traditional solutions only work on a corporate network

### Software Works Everywhere

### Software Architecture

By solving the web filtering problem directly at the endpoint, **Software** removes the need for hardware, eliminates latency, and extends protection beyond the corporate network.

## SaaS-Ready - Let us do the work for you

Traditional solutions require you to set up and support the infrastructure necessary to run a network-based solution. On the other hand does not require any hardware, sets up in minutes and allows you to provide your organization with a superior solution at a fraction of the total cost of ownership of a network-based solution - and without the IT headaches.
